Product Description

The SIM7022 is Multi-Band NB-IoT module solution in a SMT type .

It has strong extension capability with rich interfaces including UART, GPIO etc. The module provides much flexibility and ease of integration for customer's application.

The package of SIM7022 is compatible with SIM800C and SIM7020 . This also maximizes the investments of customers, and enables a short time-to-market.

It is designed for applications that need low latency, Low throughput data communication in a variety of radio propagation conditions. Due to the unique combination of performance, security and flexibility, this module is ideally suited for M2M applications, such as metering, asset tracking, remote monitoring , E-health etc..

Key Benefits

- With Power Save Mode(PSM) and Extended Discontinuous Reception(eDRX), SIM7022 can extend battery life to 10 years
- SIM7022 provides deeper coverage enhancement compared to GSM
- The package and AT commands of SIM7022 mostly are compatible with SIM800C and SIM7020.
