Notes

1. Customized design is available, please contact us.
2. All test referenced to 25°C ambient.
3. Inductance tolerance +/- 20%.
4. Inductance is measured with Agilent® LCR meter 4285A (or equivalent) at 1MHz/1V.
5. DC resistance is measured with HIOKI® micro-ohm meter RM3542 or equivalent.
6. Isat : DC current (A) that will cause Li to drop approximately 30%.
7. Irms : DC current (A) that will cause an approximate ΔT of 40°C.
8. The rated current value is following either Isat (max.) or Irms (max), which value is lower one.
9. The part temperature (ambient + temp rise) should not exceed 125°C under worst case operating conditions. PCB land pattern, trace size - thick, circuit design and proximity to other components are all the factors will affect the temperature performance of the device. Therefore, it should be approved in application conditions and end product.
10. Rated voltage:20V DC (max.)

8.1. Precaution for handling of substrate

Do not exceed to bend the board after soldering this product extremely.
(reference examples)

- Mounting place must be as far as possible from the position, which is close to the break line of board, or on the line of large holes of board.
- Do not bend extremely the board, in mounting another components.
If necessary, use back-up pin (support pin) to prevent from bending extremely.
- Do not break the board by hand. We recommend to use the machine or the jig to break it.
